SUMMARY

During iteration 1, one build was released. Build 1.0 of <https://litecart.stqa.ru/en/> has ***not been successfully tested***. Part of the functionality is not functional. Existing problems with the site are mainly related to the ***payment functionality*** and the ***shopping cart*** module. Among the defects, 1 critical and 4 basic errors were found. During this iteration the bugs have not been fixed. All bugs found have been reported.

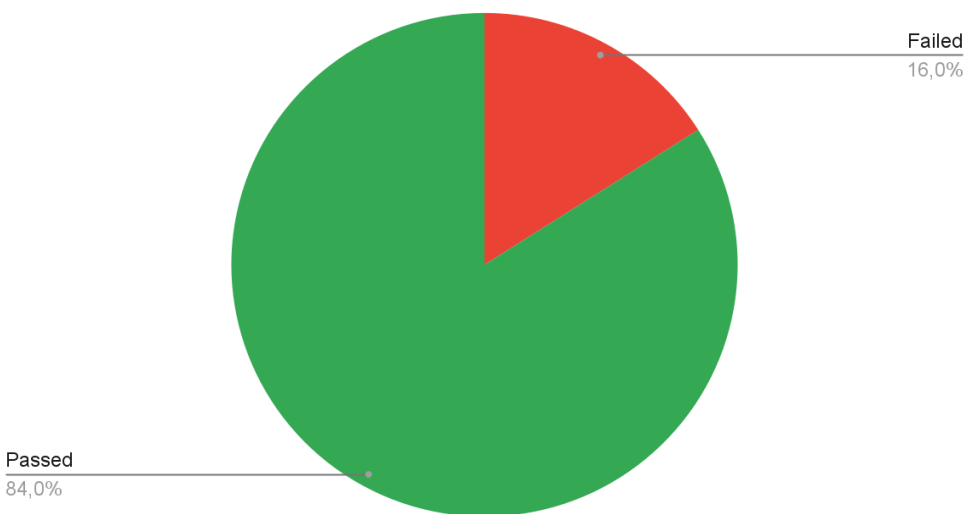

TESTING PROCESS DESCRIPTION

Site was tested on Windows 10 and Google Chrome version 98.0.4758.102 (Official Build), (64 bit).

Testing was carried out using the black box method:

- Functional testing has been carried out in accordance with the document "[Test cases 128 ДЗ №7 Илья](#)"
- In testing <https://litecart.stqa.ru/en/> ad-hoc testing will be applied due to the lack of a strict specification and limited resources to formalize the tests.
- From non-functional testing, localization testing was carried out. Other types of testing such as (*performance testing, usability testing, failure and recovery testing, configuration testing, security testing*) have not been carried out due to lack of necessary resources.

A diagram of the results of the test cases.

BUG STATISTICS

Nº	Summary	Status	Severity
1	Search. In the searchbox is done without entering a query	Found	Major
2	Search. There is no limit on the number of characters you can enter in the searchbox	Found	Minor

14	Invalid email can be entered on the Customer Details form	Found	Minor
15	Untitled or displayed incorrectly subcategory on the Rubber Ducks page	Found	Trivial
16	No information in the Delivery Information box	Found	Trivial

RECOMMENDATIONS

- No performance testing, usability testing, failure and recovery testing, configuration testing, security testing were carried out due to lack of necessary tools and resources. I recommend providing the team with the necessary tools.
- Pay particular attention to performance testing which has not been carried out due to lack of resources, this could have serious consequences in the future.
- To improve product quality and testing in general, the team needs requirements for the product being developed, documentation, mock-ups.
- It is recommended to extend the environment for testing.
- Build 1.0 **is not recommended for production**. Part of the basic functionality does not work (payment). All bugs found are not closed.
